

## **Code Review Reading Plan**

### **Chore Weasel**

#### **Checklist**

- 1. Redundancies**
- 2. Conflicts**
- 3. Unused code**
- 4. Inefficient code**
- 5. Missed tests/functions/parameters**

#### **Description**

Our code is used to both create jobs and test our jobs controller. The jobs creation code is necessary for the website to operate. Once this is developed, any user has the ability to create or search for a job. Each job also has a descriptions of the the type of job, the address, and the price.

#### **Jobs Creation**

The job\_controller.rb code controls the creation, editing, destruction and organizing of the jobs created by our users. A minimum set of parameters is necessary to ensure the jobs pass along useful information to searchers as well as meeting a standard.

#### **Job Controller Test**

The job\_controller\_test.rb code is used to test the the job creation, editing, destruction and display functionality.
