Instructor: Ron Mak

Assignment #2

Assigned: Thursday, August 27
Due: Thursday, September 3 at 2:30 PM
Team assignment, 100 points max

Pascal scanner

The purpose of this assignment is to give you practice writing a scanner for Pascal.

Start with the **`Scanner`** and **`Token`** classes in SimpleCpp.zip that we went over in class. Modify the classes to handle the following Pascal reserved word tokens:

```
PROGRAM BEGIN END REPEAT UNTIL WRITE WRITELN DIV MOD
AND OR NOT CONST TYPE VAR PROCEDURE FUNCTION
WHILE DO FOR TO DOWNTO IF THEN ELSE CASE OF
```

Handle the following Pascal special symbol tokens:

```
.   ,   :   :=   ;   +   -   *   /   (   )
=   <>   <   <=   >   >=   ..   '   [   ]   ^
```

Also recognize these tokens:

```
IDENTIFIER INTEGER REAL CHARACTER STRING END_OF_FILE ERROR
```

You can make any modifications that you deem necessary to the other classes. For a more complete list of Pascal tokens, see the syntax diagrams at
http://primepuzzle.com/tp2/syntax-diagrams.html

Comments

Your scanner should treat each comment as it would treat a blank – comments should be ignored. Pascal comments are enclosed in curly braces `{` and `}`.

Strings and character literals

A literal Pascal string is enclosed in single quotes. If a single quote character is part of a string, it is represented by two consecutive single quotes. For example, `'It''s'` contains the characters `It's`. It is possible to have the empty string: `''`

A literal Pascal character is simply a string with only one character. For example: `'a'`

Test files

Test your code on test input file **Newton.txt**:

```
PROGRAM Newton;

BEGIN
    writeln(' n   Square root');
    writeln('----------------');

    FOR n := 1 TO 20 DO BEGIN
        write(n:2);

        root := n;
        prev := root;
        diff := 99999;

        WHILE diff > 0.000001 DO BEGIN
            root := (n/root + root)/2;
            diff := prev - root;
            prev := root;
        END;

        writeln(root:14:6)
    END
END.
```

Test input file **ScannerTest.txt** will give your scanner and token classes a good workout:

```
{This is a comment.}

{This is a comment
 that spans several
 source lines.}

Two{comments in}{a row} here

{Word tokens}
Hello world
begin BEGIN Begin BeGiN begins

{String tokens}
'Hello, world.'
'It''s Friday!'
''
'A' 'x' ''''
' '' '' '   ''''''
'This string
spans
source lines.'

{Special symbol tokens}
+ - * / := . , ; : = <> < <= >= > ( ) [ ] { } } ^ ..
+-:=<>=<==.....

{Number tokens}
0 1 20 00000000000000000032  31415926
3.1415926  3.14159265358979323846264433 .14

{Bad tokens}
3.14.15926
What?
'String ''not'' closed
```

Expected output

Your output for input file **ScannerTest.txt** should be similar to the following:

```
Tokens:

    IDENTIFIER : Two
    IDENTIFIER : here
    IDENTIFIER : Hello
    IDENTIFIER : world
         BEGIN : begin
         BEGIN : BEGIN
         BEGIN : Begin
         BEGIN : BeGiN
    IDENTIFIER : begins
```

```
        STRING : 'Hello, world.'
        STRING : 'It's Friday!'
        STRING : ''
     CHARACTER : 'A'
     CHARACTER : 'x'
     CHARACTER : '''
        STRING : ' ' ' '
        STRING : ''''
        STRING : 'This string
spans
source lines.'
          PLUS : +
         MINUS : -
          STAR : *
         SLASH : /
  COLON_EQUALS : :=
        PERIOD : .
         COMMA : ,
     SEMICOLON : ;
         COLON : :
        EQUALS : =
    NOT_EQUALS : <>
     LESS_THAN : <
   LESS_EQUALS : <=
GREATER_EQUALS : >=
  GREATER_THAN : >
        LPAREN : (
        RPAREN : )
      LBRACKET : [
      RBRACKET : ]
TOKEN ERROR at line 24: Invalid token at '}'
         ERROR : }
         CARAT : ^

'not' closed'
        STRING : 'String 'not' closed
```

What to submit to Canvas

- A new version of **`SimpleCpp.zip`** that includes your modified **`Scanner`** and **`Token`** classes.
- Text files of output from running your scanner on input files **`Newton.txt`** and **`ScannerTest.txt`**.

Submit to **Assignment #2: Pascal Scanner**

There should be only one submission per team.

Rubric

Your submission will be graded according to these criteria:

Criteria	Maximum points
Reserved words handled properly.	30
Special symbols handled properly.	30
Token errors handled properly.	30
Good output format.	10
