zation of d.e.i. graphs. At present we know nothing of such characterization. Therefore, we invite the reader to consider the following problem.

**Problem 3.** Characterization of graphs which are diameter e-invariant.

**Acknowledgement.** The author wishes to express his appreciation to Profs. John Mitchem, S. Cabannis and his students in MA258 (1987) for their careful reading of an early draft of this paper.
