Palm Date Book

Mantis

ToDo

Other

Generic

Subclass

PcApp

Data Transfer Types

What type of data transfer?

Two way

Upload

Download

Custom

- What features would you like
- category support
 - Archiving
 - Sync Action config
 - File Linking

allows you to control in Hotsync

- Sync file
- Desktop Overwrite
- Watchdog
- Overwrite

Last step is you can customize names of files generated by Wizard

Conduit Entry Points

Get Conduit Info - returns conduit name, default action

Get Conduit Name - name of the conduit

Get Conduit Version - version of the conduit

Open Conduit - called by Hot Sync manager during Hotsync. Eventually leads to your code

required but defaults exist

Other Entry points

- Configure Conduit
(new) Cfg Conduit — display a configuration dialog to allow users to customize sync.
- Configure Subscription — ~~add~~^{more} file links info for HotSync
- Import Data — open dialog to allow users to configure how data mapped from file links
- Subscription Supported Update Tables — more file link stuff
