

<http://xkcd.com/224/>

LAST NIGHT I DRIFTED OFF
WHILE READING A LISP BOOK.

HUH?

SUDDENLY, I WAS BATHED
IN A SUFFUSION OF BLUE.

AT ONCE, JUST LIKE THEY SAID, I FELT A
GREAT ENLIGHTENMENT. I SAW THE NAKED
STRUCTURE OF LISP CODE UNFOLD BEFORE ME.

THE PATTERNS AND METAPATTERNS DANCED.
SYNTAX FADED, AND I SWAM IN THE PURITY OF
QUANTIFIED CONCEPTION. OF IDEAS MANIFEST.

TRULY, THIS WAS
THE LANGUAGE
FROM WHICH THE
GODS WROUGHT
THE UNIVERSE.

NO, IT'S NOT.

IT'S NOT?

I MEAN, OSTENSIBLY, YES.
HONESTLY, WE HACKED MOST
OF IT TOGETHER WITH PERL.

CS 152: *Programming Language Paradigms*

Welcome to
CS 152!

Prof. Tom Austin

San José State University

What are some
programming languages?

A word cloud of programming languages. The largest word is 'Java' in blue. Other large words include 'Python' in green and 'Javascript' in orange. Smaller words include 'C++', 'C#', 'PHP', 'lua', 'VBA', 'R', 'Objective-C', 'Scala', 'Matlab', 'Perl', 'Swift', 'Ruby', and 'Visual Basic'. The words are arranged in a somewhat circular pattern around the center.

August 2022

Why are there so many?

Different domains

INFOSEC CLUB

Different design choices

- Flexibility
- Type safety
- Performance
- Build time
- Concurrency

Which language is better?

Good language features

- Simplicity
- Readability
- Learn-ability
- Safety
- Machine independence
- Efficiency

These goals almost always conflict

Conflict: Type Systems

Stop "bad" programs

... *but* ...

restrict the programmer

Why do we make you take a programming languages course?

- You **might use one** of these languages.
- Perhaps one of these languages is the *language of the future* (whatever that means).
- You might see **similar languages** in your job.
- Somebody made us take one, so now we want to make you suffer too.
- But most of all...

We want to warp your minds.

Course goal: change the way that you think about programming.

That will make you a better *Java* programmer.

The "Blub" paradox

"As long as our hypothetical Blub programmer is looking down the power continuum, he knows he's looking down..."

[Blub programmers are] satisfied with whatever language they happen to use, because it dictates the way they think about programs."

--Paul Graham

<http://www.paulgraham.com/avg.html>

Languages we will cover (subject to change)

Administrative Details

- Green sheet: <http://www.cs.sjsu.edu/~austin/cs152-fall23/greensheet.html>.
- Homework submitted through Canvas: <https://sjsu.instructure.com/>
- Academic integrity policy: <https://www.sjsu.edu/studentconduct/docs/SJSU-Academic-Integrity-Policy-F15-7.pdf>

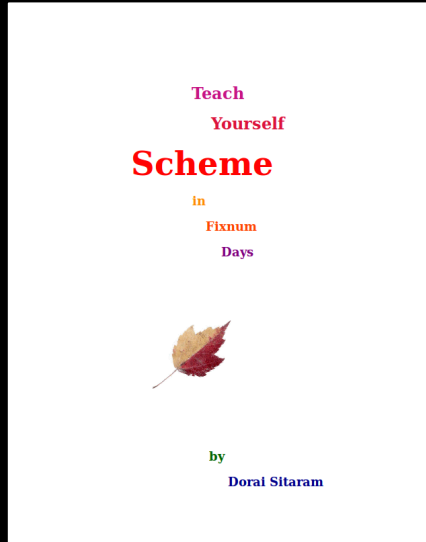

Schedule

- The class schedule is available through Canvas.
- Late homeworks will not be accepted.
- CHECK THE SCHEDULE BEFORE EVERY CLASS.

Prerequisites

- **CS 151 or CMPE 135,**
grade C- or better
- Show me proof
 - If you don't, I will drop you.

Resources

Dorai Sitaram
"Teach Yourself Scheme
in Fixnum Days".

<http://ds26gte.github.io/tyscheme/>

Other references TBD.

Grading

- 25% -- Homework assignments (individual work)
- 15% -- Class project (team work)
- 25% -- Midterm
- 25% -- Final
- 10% -- Participation (labs and drills)

Participation: Labs

- No feedback given (usually)
- I will look at them
- If you have questions, ask me

Homework

- Must be done individually
- If your assignment is too close to another student's,

YOU BOTH GET A ZERO.

- Academic integrity policy: [https://
www.sjsu.edu/studentconduct/docs/SJSU-
Academic-Integrity-Policy-F15-7.pdf](https://www.sjsu.edu/studentconduct/docs/SJSU-Academic-Integrity-Policy-F15-7.pdf)

Project

- Work alone or with ONE partner.
- Goal: Build an interpreter.
- Use Java and ANTLR

Office hours

- Mondays, noon-1pm
 - (in-person, Zoom by request)
- Thursdays, 10-11am
 - (in-person, Zoom by request)
- For updates and changes, see [http://
www.cs.sjsu.edu/~austin/office-
hours-updates.txt](http://www.cs.sjsu.edu/~austin/office-hours-updates.txt)

Racket/Scheme

What is Scheme?

- A functional language
 - Describe what things are, not how to do them.
 - More mathematical compared to imperative langs.
- A dialect of Lisp (**L**ist **P**rocessing)
- (Famously) minimal language
- Racket is a dialect of Scheme

Symbolic Expressions (s-expressions)

The single datatype in Scheme. Includes:

- **Primitive types:** booleans, numbers, characters, and *symbols*.
- **Compound data types:** strings, vectors, pairs, and of course...

LISTS!!!

Scheme lists

- Sample list:

```
(list 1 2 3 4)
```

- Alternate form:

```
'(1 2 3 4)
```

- Important functions:

- `car`: gets the first element of the list.
- `cdr`: gets the tail of the list.
- `cons`: combines an element and a list.
- `append`: appends multiple lists together.

Calling functions in Scheme

- First argument assumed to be a function
- Rest of the list are its arguments

```
// Java
```

```
foo(x, y, z);
```

```
; Scheme
```

```
(foo x y z)
```

```
$ racket
```

```
Welcome to Racket v6.0.1.
```

```
> '(1 2 3 4)
```

```
'(1 2 3 4)
```

```
> (car '(1 2 3 4))
```

```
1
```

```
> (cdr '(1 2 3 4))
```

```
'(2 3 4)
```

```
> (+ 1 (* 2 4) (- 5 1))
```

```
13
```

```
>
```

Quote indicates list
is data

First element is
assumed to be a
function

Before next class

- Install Racket from <http://racket-lang.org/>
- Read chapters 1-2 of *Teach Yourself Scheme*.
- Read Paul Graham's "Beating the Averages" article. <http://www.paulgraham.com/avg.html>

First homework due September 11

- This assignment is designed to get you up and running with Racket.
- Available in Canvas.
 - If you don't have access to Canvas, see <http://www.cs.sjsu.edu/~austin/cs152-fall23/hw/hw1/> instead.
- Get started now!

Lab 0

Familiarize yourself with scheme

Write functions to calculate the area of

- A rectangle
- A square
- A triangle
